SUMMARY

Full-stack software engineer with 11+ years of professional experience, currently based in Barcelona. My background spans the full development lifecycle — from gathering requirements with clients and stakeholders, through system design, implementation, and long-term maintenance — both as an individual contributor and as a team lead. After a deliberate step into engineering management to round out my leadership skills, I'm returning to hands-on IC work: I thrive closest to the code, the product, and it's users. I have solid experience with Python/Django, React, TypeScript, and SQL, and I'm actively exploring agentic development systems as part of my ongoing personal R&D.

TECHNICAL SKILLS

Languages: C# · Python · SQL · JavaScript · TypeScript · HTML · CSS / SCSS

Frontend: React · Angular · Blazor (Razor) · Xamarin · Bootstrap · PWA / SPA patterns

Backend: Django · Django REST Framework · Node.js · .NET (up to 8) · REST · GraphQL · SOAP

Databases: MS SQL Server / MySQL · SQLite · MongoDB · CosmosDB

Infrastructure & Tooling: Azure (App Services, Functions, Queues, Blobs, CosmosDB) · Docker · Linux · Git · CI/CD · Postman

Practices: TDD · Agile/Scrum · Code review · Technical documentation · Stakeholder interviews · Remote & multicultural distributed teams

PROFESSIONAL EXPERIENCE

Engineering Manager / Team Lead · [Hitachi Energy](#) · Barcelona, Spain | Sep 2024 – Dec 2025

Led one of two distributed teams (10 devs each) maintaining and expanding the Digital Passport System — a component-traceability and MES platform for high-voltage manufacturing, used across global HE factories and suppliers.

- Coordinated releases, hotfixes, and sprint ceremonies across a fully remote, multicultural team.
- Worked closely with product, business, and external integration partners to align priorities and ship incrementally.
- Conducted technical interviews, 1:1s, and performance reviews; resolved team conflicts with a focus on empathy and compromise.

Senior Full-Stack Developer (.NET / Blazor) · [KopiusTech](#) → [HCHB](#) · Remote | Apr 2023 – Jul 2024

Developed the first module of a Blazor + Piral micro-frontend application to replace a legacy enterprise system for a major US healthcare client.

- Built new components and features end-to-end using TDD within a CI/CD pipeline.
- Identified requirement gaps early, collaborating with POs, UX, QA, and architects to prevent rework.
- Wrote SQL data-setup scripts for automated integration tests; authored technical docs for undocumented modules.
- Presented an internal webinar (Blazor: "Straight to the meat") and performed technical screening interviews.

Senior Backend Developer (.NET / Azure) · [Svitla](#) → [ASA Financial](#) · Remote | Jul 2022 – Mar 2023

- Built serverless Azure Functions integrating third-party financial systems; standardized API interfaces across solutions.
- Documented existing architecture and business logic — reducing onboarding friction and surfacing improvement areas.

Senior Full-Stack Developer (React / .NET) · [CloudX](#) · Remote | Jul 2021 – May 2022

Maintained multiple client projects across industries — most with C# REST backends and React (JS / TypeScript) frontends.

- Worked across relational and NoSQL databases; contributed to SonarQube-gated quality pipelines.

Independent Senior Developer (multi stack) · ThinkerSys → IRC · Remote | Jul 2018 – Jun 2021

The International Rescue Committee. Sole developer on several web applications from zero to production, here I had to hit the ground running while learning and developing applications with technologies I hadn't used before, namely Azure Functions, Queues, Python/Django, React, Node.js and Linux servers.

- Built multiple Python/Django web apps from scratch, several as React SPAs with PWA capabilities.
- Gathered requirements directly from stakeholders and translated them into user stories and actionable tasks.
- Developed and maintained Azure Functions integrating Twilio, Salesforce, SendGrid, Contentful, ZenDesk, and cVent via queues and NoSQL.
- Performed complex SQL schema migrations; managed deployments on Linux VMs and Azure App Services.

Tech/Team Lead & .NET Developer · Globant → Deloitte · Rosario, Argentina | Mar 2017 – Jul 2018

- Led a team of 12 building a Xamarin iOS/Android + backend app from scratch; also led a team of 4 maintaining a separate inherited enterprise project with the same stack.

Software Developer · Accenture → CIO (Internal) · Rosario, Argentina | Mar 2014 – Feb 2017

- Developed across a complex enterprise financial system (VB.Net → C#, SQL, JS); automated team pain-points; built a Visual Studio productivity extension.

EDUCATION

Information Systems Engineering (coursework completed, degree not pursued) · Universidad Tecnológica Nacional, Rosario · 2006–2013

Personal & Professional Computing Technician · Complejo Educativo Dr. Francisco de Gurruchaga · 2003–2005

LANGUAGES & OTHER

Spanish (native) · **English** (bilingual) · **Japanese** (JLPT N4) · **Catalan** (beginner)

Legal status: Spanish resident (NIE + NUSS); dual Argentine/Italian citizenship; valid passports for both.

Outside work: 2-dan Kendo & Iaido practitioner; founder and former instructor at Rosario Budokan dojo; EN/ES interpreter for international seminars; current deep-dive interests: electromagnetism, plasma physics, CAD & simulation software, and agentic AI systems.
