

Sebastián Raúl Vansteenkiste

PROFESSIONAL CAREER SUMMARY

I began programming as a hobby in my teenage years, and have been professionally developing software since 2014. I've worked in green/brown/blue-field projects, from startups to large enterprises, as staff and in contractor positions, from full-daily commute to full-remote, as Individual Contributor, Tech/Team Lead, and Engineering Manager with up to 12 direct reports, all within mostly-remote/highly-distributed and multicultural teams and organizations.

The core of my experience lies within the ".Net" stack, not just on the backend but also in the UI with Blazor and Xamarin; but I've also diversified into python, JavaScript, node.js and React. I've managed infrastructure when necessary, both in Azure and self-hosted Linux VMs.

I also have plenty of experience and interests outside the strictly professional which've greatly contributed to my character and who I am as a person. If interested, I may refer you to [my cover letter](#) (or you can ask me [in our next interview](#) 😊).

After 12 years of professional career I'm looking for a position within a team/project/company which embraces change and doesn't shy away from challenges and difficult conversations while maintaining professional courtesy and empathy across the orgchart.

TECHNICAL SKILLS

Computer Languages:

- C# (up to date to v10, currently catching up to v12)
- Razor (Blazor's markup language)
- JavaScript (ES6)
- HTML (also XML and some SVG)
- CSS 3 (including media queries and simple animated transitions; basic SCSS knowledge)
- Python
- Markdown & MermaidML

Frameworks and Libraries

- Most versions of .Net, including .Net 8, .Net 6, Net Core v3 and .Net Framework 4.5 (VB.Net & C#)
- Azure (App Services, Azure Functions, Queues, Blobs, Tables and CosmosDB)
- Rx.Net (aka System.Reactive extensions - used for event streams for updating components)
- Django / Django-REST-framework / Django-CMS (Python)
- Web-UI: React; Angular; Bootstrap
- Gamedev: Cocos2D, Godot Engine
- Multi-platform: Xamarin (Xamarin.Forms iOS, Android, using XAML; and MvvmCross using C#)
- Testing frameworks: xUnit (Unit Testing), Moq (Mocks), bUnit (Blazor UTs)

Databases

- SQL: Microsoft SQL Server 2012 - 2019; SQLite; MySQL
- NoSQL: MongoDB, CosmosDB
- Editors: MS SQL Server Management Studio, MySQL Workbench, DBeaver, VS Code w/DB plugins

Other relevant knowledge

- Test Driven Development (TDD)
- Agile Methodologies (mostly Scrum, not certified; mostly with JIRA and Azure DevOps)
- Code versioning with Git (mostly with UI tools, minimal console use)
- Diverse API approaches including SOAP, REST and GraphQL
- Twilio API integration and conversation flow design
- Development tools such as Visual Studio Code, Visual Studio (currently latest, all versions since 2002), Notepad++, Putty, cURL, Windows' CMD, Linux Bash, PowerShell, Postman and others.
- Technologies used in the past (small personal projects only): PHP, Java, SmallTalk, Pascal, C, C++, COBOL
- Miscellaneous: 3D modeling and CAD; Spreadsheets with complicated formulas; Multiple text, audio, video and image (raster and vector) editing softwares

HUMAN LANGUAGES

- Spanish (native speaker)
- English (bi-lingual, not certified)
- Japanese (basic competence, passed international 4kyuu level test)
- Catalan (less than basic competency for now, sadly)

TALKS AND PUBLICATIONS

- Blazor: "Straight to the meat" ([video](#) & [slides and code](#))

PROFESSIONAL EXPERIENCE

Hitachi Energy, Barcelona, Spain

2024/09 – 2025/12

Roles: Team Leader, Tech. Team Lead and Line Manager / Software Engineering Manager

Client / Project: HV (High Voltage Business Unit) / "Digital Passport System"

2024/09 – 2025/12

Relevant Keywords: C#, .Net, SQL, Team Leadership, Conflict Resolution, Task Prioritisation

Description: *DPS is a vital component traceability and manufacturing execution software for high voltage products used worldwide in HE factories and the suppliers who provide them with components. I joined to lead one of the two distributed and mostly-remote multicultural fullstack teams of 10 developers working on maintaining and expanding the existing functionalities and integrations with external systems.*

Milestones:

- Documented existing software development methodology being followed and incrementally proposed improvements over time
- Progressively gained knowledge of the full-project's complex stack, including the various integrations with external systems
- Prepared builds and coordinated efforts for both planned releases and "hotfix" deployments
- Collaborated with Business stakeholders and the Product and Service teams, providing Release Notes for users and internal technical documentation
- Organized and led a number of ceremonies including functional and technical refinement meetings, sprint plannings, retrospectives and daily "stand-ups", documenting and scheduling action items
- Coordinated the workforce to ensure efforts were aligned with the current top priority considering both issues reported by users and user stories planned for development.
- Performed technical interviews to candidates postulating to open positions in the project
- Performed periodical 1:1 check-ups with team members, follow-ups and performance reviews
- Resolved internal disputes and disagreements by finding compromise solutions while addressing all involved parties' concerns empathetically

KopiusTech, Remote

2023/04 – 2024/07

Role: .Net Sr. Fullstack Developer**Client / Project:** HCHB (Homecare Homebase) / "Visit Scheduler Calendar"

2023/04 – 2024/07

Relevant Keywords: C#, .Net 6, .Net 8, Blazor, Piral, Node.js, GraphQL, REST APIs, MS SQL Server, Azure DevOps, Swagger, Confluence, Postman, jMeter, TDD, CI, CD, LINQ, Rx.Net (System.Reactive), Micro-frontends**Milestones:**

- Developed the first module of a Blazor+Piral micro-frontend-based-webapp to succeed an enterprise legacy application for a major client in the US Health sector.
- Spearheaded development while leaving a trail of useful documentation for future work and troubleshooting difficult situations within the client's extensive and complex technological ecosystem.
- Developed new components and features following TDD within a CI/CD release cycle
- Worked closely with POs identifying gaps in requirements and anticipating technical needs
- Coordinated efforts with multiple teams across several client initiatives in order to avoid work duplication, ensure smooth transitions between deployment versions and troubleshooting complex issues
- Collaborated with UX/UI designers, architecture decision-makers, QA team, product owners and business analysts regarding a wide variety of related topics.
- Wrote data-setup SQL scripts for enabling QA team's automated integration tests
- Prepared and presented a webinar within the "Kopius Academy" initiative (Blazor: "Straight to the meat")
- Performed technical screening calls for potential new hires
- Wrote technical documentation for features and modules which were already developed and lacked usage & troubleshooting instructions as well as architectural explanations

Svitla, Remote

2022/07 – 2023/03

Role: .Net Sr. Backend Developer**Client / Project:** ASA Financial**Relevant Keywords:** C#, .Net, Azure, Swagger, JIRA, Confluence

Description: Participated in the development of a patented platform for allowing Financial Institutions to provide services to their Account Holders through Fintechs. Besides day-to-day general development tasks within Microsoft's .Net/Azure serverless ecosystem, I made special efforts to document the existing architecture and business logic and proposed improvements; and stabilize and standardize APIs across solutions, both in their exposed interfaces and how they handle requests.

CloudX, Remote

2021/07 – 2022/05

Role: Sr. Fullstack Developer**Clients / Projects:** Several in rotation, none-disclosable**Technologies:** ReactJS, Angular.js, HTML, TypeScript, JS, JSX, CSS, C#, .Net, .Net Core, Swagger, Azure DevOps, SonarQube, Oracle S3, Oracle APEX, MongoDB

Description: Collaborated in the maintenance of several projects from diverse industries and wingspans. Most with C# REST API backends and ReactJS frontends, both JS and Typescript based. Also worked with relational and no-SQL databases for everyday tasks.

ThinkerSys, Rosario, Argentina

2018/07 – 2021/06

Role: Independent Sr. Software Developer**Client / Projects:** The IRC (International Rescue Committee) / several websites and integrations, non-disclosable**Relevant Keywords:** Azure, D365, PGP, Kleopatra, FTP, Sendgrid, Python, Django, Django-REST-framework, Node.js, React, HTML, JS, JSX, CSS, Bootstrap, Contentful, Transifex, ZenDesk, Twilio, C#, Azure Queues, CosmosDB, cVent, Salesforce, SQL, webpack, powershell, PWA, SPA**Milestones:**

- Single-handedly developed several Python/Django web applications from scratch, some of which were SPAs with React.js frontends with PWA capabilities

- Gathered requirements from Stakeholders and refined them into comprehensive User Stories and actionable Tasks
- Maintained Node.js+React.js SPAs and Python/Django web applications developed by others
- Performed complex SQL schema migrations
- Developed and maintained Azure Functions integrating several third-party systems using events, queues and NoSQL databases
- Managed deployments of Python/Django applications using dedicated Linux Servers/VMs and Azure App Services

Globant, Rosario, Argentina

2017/03 – 2018/07

Roles: .Net Sr. Developer - Xamarin Technical/Team Leader

Client / Projects: Deloitte / "RCM", "Magnet"

Technologies: C#, Xamarin Native, MvvmCross, Moq

Milestones:

- Led a team of 12 developers creating a Xamarin Android/iOS + Backend application from scratch
- Led a team of 4 developers maintaining the Xamarin Android frontend of an inherited enterprise application
- Coordinated efforts with other Team Leads, BA, PM and Client Stakeholders

Accenture, Rosario, Argentina

2014/03 – 2017/02

Role: Programmer and Scope Item lead

Client / Project: CIO (Client Internal Operations) / "MME" ("Manage My Engagements")

Technologies: VB.Net, C#, HTML, JS, jQuery, SQL, CSS

Milestones:

- Quickly adapted to CIO's complex enterprise architecture & financial "cube" DB
- Automated project's pain-points to increase team productivity & morale
- Solved bugs within complex SQL queries and financial forecasting calculations
- Developed a Visual Studio extension for team productivity
- Developed "Scope Items" (Reqs.) as IC, in cooperation of other devs, and leading teams of up to 3 devs

Previous experience (freelance)

2005 – 2014

- You may find my full career history on my LinkedIn profile:
<https://www.linkedin.com/in/srvans/details/experience/>

EDUCATION

Leaving aside miscellaneous courses and certifications, the bulk of my skills are self-taught, then some come from the following institutions:

Rosario Nihongo Gakko, Rosario, Argentina

2008 – 2009

4kyuu (Level 4) Japanese Proficiency speaker

Universidad Tecnológica Nacional, Rosario, Argentina

2006/03 – 2013*

Information Systems Engineer (*dropped-out after finishing courses without pursuing degree)

Complejo Educativo Dr. Francisco de Gurruchaga, Rosario, Argentina

2003/03 – 2005/12

Personal and Professional Computing Technician
